

Suriya S

GenAI/Agentic AI Engineer | Full-Stack Developer

8807588826 | contactsuriyas@gmail.com | github.com/ssuriya1

PROFESSIONAL SUMMARY

Results-driven GenAI/Agentic AI Engineer with 5.8 years of experience building intelligent autonomous systems and enterprise applications. Specialized in Large Language Model (LLM) architectures, multi-agent orchestration, and retrieval-augmented generation (RAG) pipelines on AWS Bedrock. Hands-on expertise with Claude, prompt engineering, MCP servers, and tool-use patterns for autonomous agents. Proficient in full-stack development with Angular, AWS cloud infrastructure, and GitHub Actions CI/CD. Proven ability to translate complex AI concepts into production-grade systems delivering measurable business value.

TECHNICAL SKILLS

GenAI/Agentic AI: Claude (Prompt Engineering, Tool-Use Patterns, Multi-Agent Orchestration), AWS Bedrock, LLM Architectures, RAG Pipelines, Vector Databases (OpenSearch), MCP Servers, Autonomous Agents, Agentic Workflows, System Prompts, Guardrails

LLM Models & APIs: Claude (Anthropic), Titan Embedding V2 (AWS), Google Gemini API, Real-Time LLM Streaming, Server-Sent Events (SSE)

Frontend & Mobile: Angular (17+), TypeScript, JavaScript (ES6+), NgRx, RxJS, Angular Signals, Ionic Framework, Capacitor, Angular Material, HTML5, CSS3/SCSS, Responsive Design

Cloud & Infrastructure (AWS): Bedrock, Lambda, API Gateway, S3, DynamoDB, EC2, CloudFront, SQS, SNS, CloudWatch, IAM, Rekognition, CloudWatch Anomaly Detection

DevOps, CI/CD & IaC: GitHub Actions, Docker, Terraform, Infrastructure as Code, Automated Testing, Git, GitHub Copilot, Amazon Q

Backend & Supporting: Java (Spring Boot), REST APIs, Microservices Architecture, Functional Programming

Tools & Frameworks: Jira, Contentful CMS, Google Cloud, AI-Powered Code Generation(Python), Agile/SAFe

PROFESSIONAL EXPERIENCE

Cognizant Technology Solutions

Jan 2025 – Present

GenAI/Agentic AI Engineer & Angular Developer

- **Multi-Agent Agentic System & Release Notes Generation Agent:** Architected and deployed production-ready multi-agent application using Claude with custom MCP (Model Context Protocol) servers for autonomous data fetching from enterprise sources (Jira, third-party products). Implemented agent-based orchestration with tool-use patterns, git diff analysis, and Google Gemini API integration for real-time context enrichment. System autonomously generates contextual release documentation and executes complex tasks without manual intervention (Savant Rally Innovation Hackathon)
- **Real-Time LLM Streaming:** Implemented low-latency character-by-character LLM response streaming in Angular using Server-Sent Events (SSE) with Angular Signals for token visualization in chat interfaces
- **RAG Pipeline with AWS Bedrock:** Architected retrieval-augmented generation (RAG) pipeline on AWS Bedrock with OpenSearch vector database integration, implementing semantic chunking, PII masking, and security guardrails for enterprise-grade knowledge retrieval
- **Developer Velocity Enhancement:** Accelerated development velocity by 40% by creating custom GitHub Copilot instruction sets to enforce codebase patterns, UI conventions, and GenAI best practices
- **Spectrum Telecom Platform:** Designed and implemented hybrid mobile features using Angular, RxJs, NgRx, Ionic, and Capacitor for telecom workflows (E-Sim Activation, Number Porting, account management), integrating AI-powered assistance
- **Cloud Infrastructure & Self-Healing:** Architected AWS self-healing infrastructure patterns with automated health checks and anomaly detection using CloudWatch metrics for autonomous recovery and fault tolerance

Tata Consultancy Services

Aug 2020 – Jan 2025

Angular Developer, Cloud Engineer & DevOps Specialist

- **Legacy Application Modernization:** Led modernization of Agents Communication Hub by migrating to component-based Angular architecture with lazy-loading and code splitting, reducing initial load time by 50% and improving end-user experience for 500+ daily users
- **High-Traffic Airline Platform:** Engineered high-traffic Airline Booking Sandbox using AWS Lambda, API Gateway, and DynamoDB, implementing real-time NDC API integration with secure IAM policies and custom authentication mechanisms for enterprise-grade systems
- **Performance Optimization:** Optimized application performance by 45% through advanced Angular optimization techniques (tree-shaking, OnPush change detection, RxJS operator optimization) and bundle size reduction, directly improving platform responsiveness
- **Content Management Integration:** Integrated Contentful CMS with Angular services to decouple content management from application deployments, accelerating content deployment cycles by 70% and enabling non-technical teams to manage content independently
- **CI/CD Pipeline Migration:** Architected and migrated CI/CD infrastructure from Jenkins to GitHub Actions with Terraform-based Infrastructure as Code, reducing deployment lead time by 60% and automating infrastructure provisioning across environments
- **Test Automation & Efficiency:** Automated 500+ SOAP UI regression test cases within GitHub Actions pipelines, reducing regression testing time from 3 hours to 45 minutes (75% efficiency gain), freeing engineering bandwidth for higher-value development
- **Media Validation Pipeline:** Architected automated media validation pipeline using AWS S3, SQS, and Rekognition for automated video verification with real-time monitoring via CloudWatch and user notifications through SES
- **Angular Architecture & Advanced Features:** Implemented custom Angular directives and domain-specific pipes for enterprise-grade applications, including custom components and advanced pattern implementations

KEY ACHIEVEMENTS

- **Multi-Agent Orchestration:** Built production-ready agentic AI system with Claude and MCP servers, enabling autonomous task execution and third-party data integration without manual intervention
- **Real-Time AI Integration:** Implemented low-latency LLM response streaming in Angular with token-level visualization, enabling responsive AI-powered chat interfaces and improving user engagement metrics
- **RAG System at Scale:** Deployed retrieval-augmented generation pipeline with OpenSearch vector database on AWS Bedrock, achieving high-accuracy knowledge retrieval with security guardrails and PII protection
- **75% Testing Efficiency:** Automated 500+ regression test cases reducing testing cycle from 3 hours to 45 minutes, increasing development team productivity and reducing release cycle time
- **45% Performance Improvement:** Optimized Angular bundle size and application performance through advanced optimization techniques, directly impacting user experience for enterprise platforms
- **70% Content Deployment Acceleration:** Decoupled CMS from release pipelines enabling independent content management and reducing time-to-publish from days to hours

CERTIFICATIONS

Cloud & AI: AWS Certified Cloud Practitioner | Microsoft Azure Fundamentals
GitHub & Development: GitHub Actions | GitHub Administrator | GitHub Foundation | GitHub Copilot
Recognition: Best Team Player Award (2x) | Client Appreciation Award

EDUCATION

Anna University (Distance) <i>Master of Computer Applications (MCA) – 70%</i>	2022 – 2024
A.M. Jain College <i>Bachelor of Computer Applications (BCA) – 75%</i>	2017 – 2020
